

Army Water and Energy Reporting System (AWERS)

- **Problem:** The Army needed to collect energy and water usage data from over 300 DOD sites worldwide, and provide sites and regional offices with numerous reports.
- **Solution:** Aspex developed a user-friendly system for field input of data using Oracle suite of products over the Web. Aspex provided all users with traditional tabular reports as well as graphical reports and on-line analysis.
- **Result:** The overall result is easier data collection, improved quality of data, reports more useful, and analytical capabilities to help conserve energy resources. Aspex has continued to maintain and enhance the AWERS system. Open-source solutions such as JASPER and AJAX have been inserted into the system to provide a state-of-the-art Internet system.
